DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-16 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1 and 12 recite "type" in the preamble. The metes and bounds of the claim cannot be determined.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-10, 12-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lemetyinen et al. (5,664,731) in view of Dean et al. (4,404,507).

Lemetyinen discloses a shower head spray device comprising: an elongated spray deader 12; a drain opening 11; a valve 10. Lemetyinen discloses, in column 3, line 58, a rotation means to rotate shaft 13 but does not disclose a motor. Motors are well known in the art for imparting rotational motion, e.g. electric drill/driver. Dean

discloses a motor Mx and microprocessor based control circuit to rotate and translate screw 104. It would have been obvious to a person having ordinary skill in the art at the time of the invention to have used a motor to as the rotation means in the device of Lemetyinen as taught by Dean for automation.

5. Claims 1-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lemetyinen et al. (5,664,731) in view of Hunt et al. (5,048,282).

Lemetyinen discloses a shower head spray device comprising: an elongated spray deader 12; a drain opening 11; a valve 10. Lemetyinen discloses, in column 3, line 58, a rotation means to rotate shaft 13 but does not disclose a motor. Motors are well known in the art for imparting rotational motion, e.g. electric drill/driver. Hunt discloses a motor 52, drive pinion 51, drive gear 53 and microprocessor based control circuit (figure 19). It would have been obvious to a person having ordinary skill in the art at the time of the invention to have used a motor to as the rotation means in the device of Lemetyinen as taught by Hunt for automation.
